

along the western edge of the Appalachian Plateau from Massachusetts to northern Alabama. Other areas with cliffs include the Interior Low Plateaus and Ozark Plateaus physiographic provinces. These cliffs are best developed along the Red River and Cumberland River drainages on the Cumberland Plateau, roughly eastern-central Kentucky south to northern Alabama. They most often are found along stream valleys, sometimes close to the streams, sometimes well uplope. The cliffs are commonly punctuated with recesses, often just not shown along the base of the
